

## Case #1 Update: Steve

- Uses FlexForm exclusively in his PWC; since fitted, time of use is 34 months (as of March 2019)
- Continues to achieve goals and maintains skin integrity
- FlexForm remains easy to clean
- No maintenance needed (no foam to replace; no air/liquid volumes to maintain; original covers, including the GlideWear component, remain in good shape)

“Ease of mind! FlexForm has taken the fear out of my daily thoughts. Through the evolution of seating systems I have used, there has been that nagging fear in the back of my mind about getting another pressure sore. Either the seat cushion I was using could have lost air pressure or foam had gotten compressed, turning into a rock-hard surface.

I don't have those thoughts anymore with the FlexForm cushion. There's no part of the cushion that's going to change. My body will change and the straps can be adjusted according to where my body needs the extra space.

My hips had to be removed due to osteomyelitis. If I need modifications due to future surgeries, the changes needed can be found right away instead of guessing how and where to add more foam.”

Steve  
Client with a SCI at C5-6 using a FlexForm for 3 years

## Case #2 Update: Bob

- In 2015 client sustained a shoulder injury necessitating use of a PWC; a FlexForm insert was provided for him in this PWC
- Client uses FlexForm exclusively in one w/c or the other; since fitted, time of use is 66 months (as of March 2019)
- Continues to achieve goals and maintains skin integrity
- FlexForm remains easy to clean
- One set of covers and thigh pad assembly (on the integrated MWC version) have been replaced due to normal wear
- Client self-selects using the PWC or the MWC based on activities planned and shoulder condition (he prefers using the MWC)

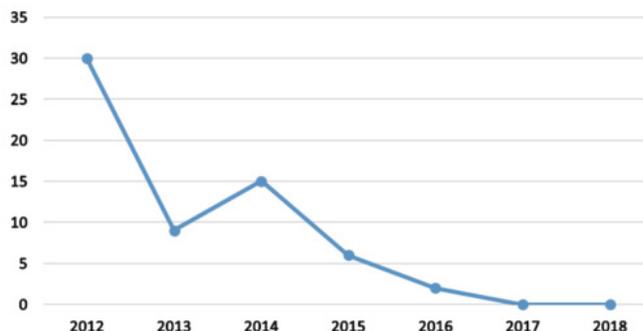

“I've had my FlexForm for five plus years and it is the best cushion by far that I have ever used. My pressure sores are non-existent since I started using this cushion. I've tried others, but I know this is the best for my seating. I have one in my power chair and one in my manual chair. I'm going to keep using the FlexForm as long as I can, and I recommend it to anyone in a wheelchair. It's the best. I have been in a wheelchair for 19 years.”

Bob  
Client with SCI at L1-T12 using a FlexForm for 5½ years

## Case #3 Update: Richard

# of Chiropractor Visits per Year Due to Pain

- Client uses FlexForm exclusively in his MWC; since fitted, time of use is 56 months (as of March 2019)
- Continues to achieve goals and maintain skin integrity
- FlexForm remains easy to clean
- No maintenance needed (no foam to replace; no air/liquid volumes to maintain; original covers, including the GlideWear component, remain in good shape)
- Need for chiropractor visits continued to be minimal

“Before FlexForm, I could not get through my day without standing in my stander for a while to get my rear end a break. I would often stand most of the day at work because it was too painful to sit. This is not the case anymore! I can sit (or stand) as much as I want, not because I am forced to. I can’t emphasize enough just how the FlexForm has revolutionized my day. I have gone from constant pain and worry over sitting issues to actually being able to have normal days every day. What a joy!”

Richard

Client with a SCI at T5 using a FlexForm for 4½ years

## Case #4 Update: Rob

“I have been a paraplegic for 32 years. In 2014, after multiple spinal surgeries, my seating became even more important. I developed a stage 4 pressure sore on my buttocks. After surgery and bedrest for 6 months, which didn’t result in improvement, I had flap surgery. Then I was introduced to the FlexForm. What a gamechanger.

After pressure mapping both my old cushion and the FlexForm, I saw major improvements in my buttocks and thigh areas. It was so easy to make major and minor adjustments to ensure the FlexForm fit my needs perfectly. I know that as I age, my skin does, too. The FlexForm keeps my underside dry and has kept my incision area healthy and free from shearing and redness.

I have been so pleased with this new technology and what it has done for my skin! In the four years since my flap surgery, I have had no issues with my bottom. I will never go back to a standard cushion again. I owe my bottom to FlexForm!”

- Client uses FlexForm exclusively since Aug 2018; since fitted, time of use is 43 months (as of March 2019)
- The surface was remolded in August using techniques that had evolved from experience using this design, which deliver the optimal surface pressure distribution at about a 2” ‘less deep’ pelvic recess.
- The surface continues to be anatomical with significant contours and pelvic depth, greatly improving functions such as exit transfers, dressing, and toileting
- Continues to achieve goals and maintains skin integrity
- FlexForm remains easy to clean
- No maintenance needed (no foam to replace; no air/liquid volumes to maintain; original covers, including the GlideWear component, remain in good shape)
